Knotless FIBERKNOT® 2.9mm

BIOTEK

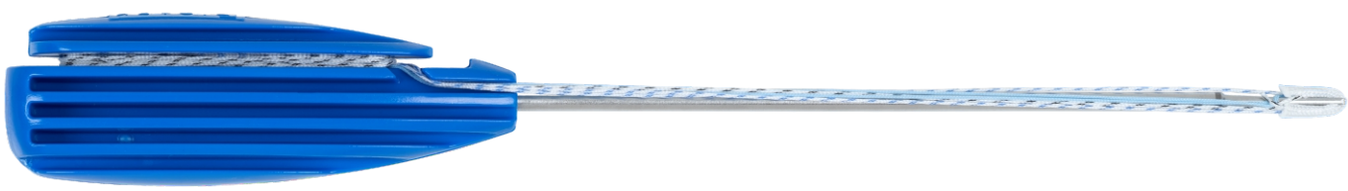
Issue No. 026 | PB026/August/25

Knotless FIBERKNOT® 2.9mm

EU-MDR

Introducing the New Knotless **Fiberknot®** 2.9mm. The Knotless **Fiberknot®** 2.9mm is equipped with 2 knotless locking mechanisms, a Chinese finger trap and a self-tying knot. These two locking mechanisms makes for a robust knotless anchor.

- Anchor size, 2.9mmx15mm, after bulging 5.0mm
- Anchor inserter shaft length, 150mm
- Pull out strength, 352.5N



Key Features & Benefits:

- **Subcortical fixation**

  The 2.9mm Fiberknot deploys into a 5.0mm subcortical suture ball. This subcortical suture ball produces 352.5N of tensile strength.

- **Knotless Repair suture**

  The No:2 UHMWPE Biofiber is knotless construct is equipped with 2 locking mechanism, a conventional Chinese finger trap and a self-tying knot. This creates a strong and reliable knotless repair.

- **Self-Punching Inserter**

  The anchor inserter has been developed with a strong and robust tip to aid in self-punching anchor insertion on Humeral and Femoral condyle bone.

Indications:

- Remplissage
- Medial Row Cuff Repair
- Lateral Extra Articular Tenodesis
